

Error Occurred While Creating-Cancellation feature in Booking app.

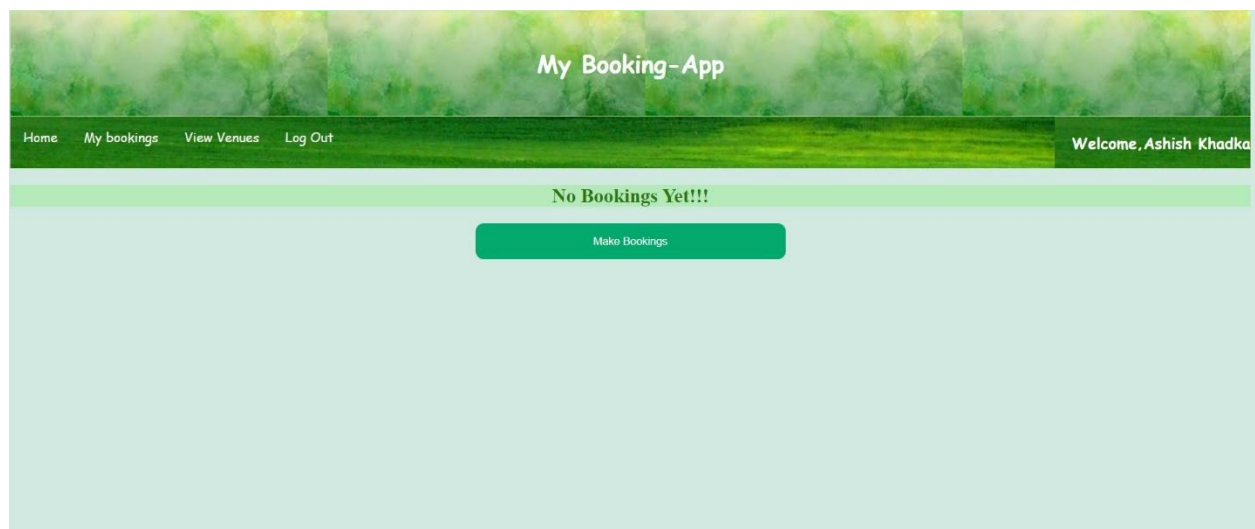

```
public function delete($id=null)

    $booking_id=DB::table('Booking')
    ->where('I_id',$id)->get();

    $booking=DB::table('Booking.I_id')->delete();

    return $id?$booking_id:$booking;
```

While using above delete function in Booking_api controller thinking that I may delete the specific Item form database but rather that function deleted all my bookings.

And also now I am unable to book any venues in booking app too.

Cancelled booking through API -Testing from Postman:

(In addition, my booking app has experienced further issues, all of which I hope to address as quickly as possible.)
