

Cancellation feature in Booking app.

Initially, As seen in the below screenshots In My Bookings we created a simple Cancel booking Button from where the user can easily cancel the booking.

Name	Price	Opening Time	Closing Time	Address	Contact	Rating	Action
Swoyambhu Recreation Center	1500	9AM	9PM	Ring Road	01-5247239	4	Cancel Booking
Nepa futsal	1500	Open 24 hours	9 PM	Kathmandu	984-3199318	4	Cancel Booking
United Futsal	1500	6AM	8PM	Bijaya Marg	01-5237599	4	Cancel Booking

After clicking the button of cancellation for Nepa futsal the booking_Id of Nepa futsal (56) get deleted.

CANCELLED

Booking cancelled!

Done

Over and Above, Clicking Done will redirect towards MY Bookings page. Where the user will not be able to see the Nepa futsal Booking.

Welcome,Ashish Khadka

My Bookings

Name	Price	Opening Time	Closing Time	Address	Contact	Rating	Action
Swoyambhu Recreation Center	1500	9AM	9PM	Ring Road	01-5247239	4	<div>Cancel Booking</div>
United Futsal	1500	6AM	8PM	Bijaya Marg	01-5237599	4	<div>Cancel Booking</div>

Back

How we created cancel button:

```
@foreach($info as $item)
<tr>
  <td>{{ $item['I_name'] }}</td>
  <td>{{ $item['I_price'] }}</td>
  <td>{{ $item['I_start_time'] }}</td>
  <td>{{ $item['I_end_time'] }}</td>
  <td>{{ $item['I_address'] }}</td>
  <td>{{ $item['I_phone'] }}</td>
  <td>{{ $item['I_rating'] }}</td>

  <td>
    <a href="{{ url('cancel/'.$item['B_id']) }}">
      <button class="button_book">Cancel Booking</button></a></td></th>

</tr>

@endforeach
```

Also, For the cancellation of booking we have fetched the delete method from API because of which it sends the response by deleting the booking.

```
public function cancel_booking($id)
{
    $response= Http::withHeaders(['Authorization'=>'Bearer '.session()->get('token')])
->delete('http://127.0.0.1:8000/api/cancel/'.$id)->json();

    return view('cancel_confirm');
}
```

And return view to (Confirm_cancellation) Page.
